

MORTAR MIXER

Mortar mixers are sometimes called stucco mixers, have a horizontal shaft with paddles attached .
The drum of the mixer is semi-cylindrical and is stationary during mixing. The shaft and paddles rotate to mix the concrete in the drum. Mortar mixers can usually handle concrete with up to 3/8" aggregate.

The downside of mixing larger aggregate is that it significantly increases wear on the drum and on the paddle blades, which often use rubber strips that act like squeegees. Wear is reduced significantly with more fluid mixtures and is significantly increased with stiff mixtures, mixers with stiff mixtures, mixers with plastic drums.

CPM 220D

Ops.Weight: 200kg
General Dimen:
1800mmx1050mmx1750mm
Pan Capacity: 220L
Mixing Speed: 10L/min
Transmission Speed: 3000rpm
Power: 4.1kW 5.5Hp
Power Source: Diesel

CPM 220EQ

Ops.Weight: 200kg
General Dimen:
1800mmx1050mmx1750mm
Pan Capacity: 220L
Mixing Speed: 10L/min
Transmission Speed: 1500rpm
Power: 3.0kW 4.0Hp
Power Source: Electric Motor 3-Phase 380V
